India | Open to relocation (Germany) | Visa sponsorship required

SUMMARY

Engineer with 6+ years of experience designing scalable enterprise web platforms and building applied AI workflows. Specialised in full-stack architecture, agentic AI integrations (RAG, LLMs), and high-performance frontend systems for the healthcare, cybersecurity, and e-learning domains.

SKILLS

Languages & Frameworks: TypeScript, JavaScript (ES6+), Angular, React, Next.js, Node.js, Python, FastAPI

Databases & Cloud: PostgreSQL, MongoDB, AWS (EC2, Lambda), GCP, Docker, Kubernetes

Applied AI & Protocols: RAG, Claude API, OpenAI API, WebRTC, REST APIs, Microservices

WORK EXPERIENCE

Quest Global | *Senior Software Engineer*

Nov 2023 - Present | India

- **Architected Privylens (HIPAA & GDPR Compliance Tool):** Designed an internal AI-driven assessment platform replacing manual compliance reviews. Integrated a RAG model to autonomously analyze complex documents against dynamic question sets and generate comprehensive reports, massively accelerating the product pre-release workflow.
- **Engineered SOUP Manager (Security Scanning Platform):** Developed a centralized application to execute and track system, code, artifact, and Docker image scans. Built an intuitive frontend UI and a historical assessment reporting engine, substantially reducing resource overhead by unifying disparate scanning processes into a single tool.
- Led technical engineering initiatives across AWS (EC2, Lambda) and Kubernetes environments, bridging frontend delivery with robust cloud infrastructure to support these enterprise cybersecurity platforms.
- Mentored and successfully onboarded 10+ engineers while leading technical code reviews and enforcing strict SonarQube quality standards across the team.

SADA Systems | *Senior Software Engineer*

Aug 2022 - Nov 2023 | India

- Led the frontend architecture for a high-traffic e-learning platform (SNHU), utilizing Next.js, Angular, and GCP to reliably handle high concurrent student activity.
- Engineered backend microservices and serverless functions using Python, Node.js, and Google Cloud Functions.
- Optimized content delivery and frontend scalability through advanced lazy loading and Google Cloud CDN caching, drastically reducing latency.

Experion Technologies | *Software Engineer*

Jan 2022 - Aug 2022 | India

- Developed secure, highly available Node.js and PostgreSQL microservices deployed via AWS Lambda for a strict HIPAA-regulated healthcare platform.
- Configured Nginx reverse proxies for secure API routing and load balancing, ensuring >99% uptime and reliably supporting 20,000+ active users.

Dexlock Technologies | *Software Engineer*

Oct 2020 - Jan 2022 | India

- Built responsive frontend applications for telehealth and e-commerce platforms using React and Angular, engineering real-time WebRTC video and WebSocket chat capabilities.
- Optimized backend Java/Dropwizard services and complex MongoDB queries, achieving a 35% improvement in backend query performance.

Trois Infotech | *Associate Software Engineer*

Nov 2019 - Sep 2020 | India

- Migrated legacy AngularJS monoliths to modern Angular architectures for government digital dashboards, yielding a 45% improvement in overall page performance.
- Designed secure REST APIs with Node.js and deployed full-stack applications to AWS EC2 Linux environments.

EDUCATION & CERTIFICATIONS

- **Bachelor of Technology (B.Tech)**, Computer Science and Engineering, University of Kerala (2015 - 2019)
- **Google Cloud Certified** - Associate Cloud Engineer
- **Certified Full Stack Developer** - MEAN Stack

LANGUAGES

- **English:** Fluent
- **German:** Beginner (Studying toward CEFR A1)
